# Solar Pump Solution

Professional solar pump inverter and system provider

## application

- solar agricultural irrigation
- solar aeration system
- solar water treatment system
- desert control
- pasture animal husbandry
- scenic fountain etc.

**Jntech Renewable Energy Co., Ltd**

## Online Service Time 24 Hours 7 Days

- Marketing support
- Technical service
- Training service
- Pro club

## INTRODUCTION

JNTECH RENEWABLE ENERGY CO., LTD was set up in 2006, is an international high-tech enterprise, which integrate intelligent power electronics products' R&D, manufacture, sales and service, with branches at different countries and regions in Pakistan, Kenya, Sudan, Dubai, Philippine, Morocco and Mexico.

Rely on Chinese famous technology university's human resource and technical advantage, JNTECH upgrades products and technology through enterprise, university, research cooperation, owns more than 60 solar patents, participates to set China Solar Standards; JNTECH developed solar off grid inverter, solar pumping inverter, solar household energy storage inverter and related system are widely used in more than 60 countries. JNTECH has been listed in the bidding catalogue and preferred brand of internationa projects by IBRD, UN, FAO, NGOs, etc.Over the years, "JNTECH" brand enjoys a high reputation in the industry.

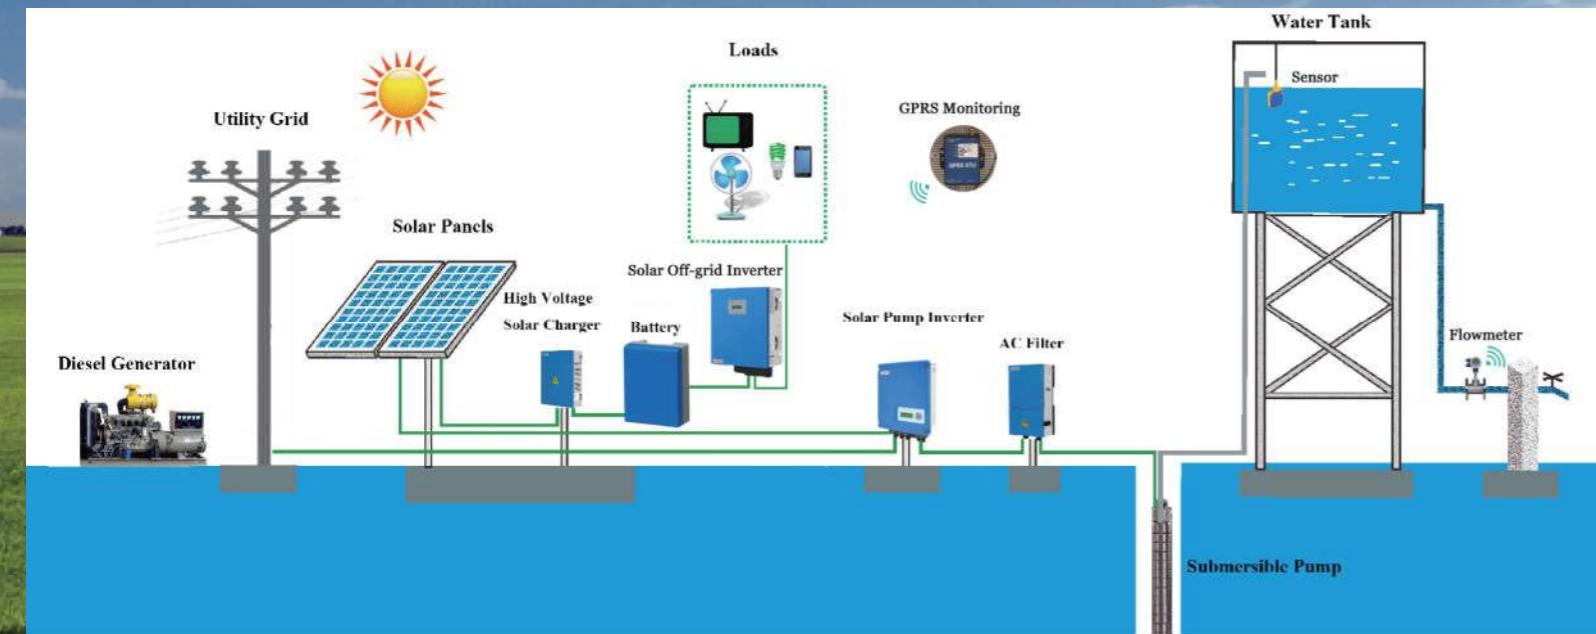

JNTECH exerts to become the outstanding international solar solution provider for intelligent solar energy products, solar irrigation and water treatment system, solar ecological treatment systems. Adhering to the idea of "Creating green energy future, Ensure the sustainable social development", JNTECH takes scientific development view as guideline creating green eco-friendly new energy as duty, keeps serving society,people and the national.

## Jntech in Worldwide

Up to now, Jntech has installed solar pump inverter & solar pump system in more than 60 contries all over the world. Jntech R&D and manufacturing is going to the world!

Brazil	USA	Algeria	Germany	Australia	Mexico
Venezuela	Canada	Arab	Thailand	Sudan	Turkey
Colombia	South Africa	Pakistan	India	Indonesia	Syrian
Argentina	Kenya	UK	Ukraine	Philippines	
Peru	Egypt		Kazakhstan		Cambodia

## System application

### ◆ System Application

Solar pump system can be applied in area with sunshine and seras lack of electricity.

- Daily water using
- Agricultural irrigation
- Forestry irrigation
- Desert control
- Pasture animal husbandry
- Rural town and village water supply
- Desalination of sea water
- Scenic fountain etc.

### ◆ System Introduction (AC system)

Solar pump system consists of four parts: solar panels, solar pumping inverter, three-phase AC pump and water storage device. The solar pump inverter converts DC power produced by solar panels to AC power which drives AC pump to pump water from borehole, river, lake etc. to the storage device. The inverter applies high efficiency MPPT algorithm to maximize power harvested from solar panels. It will make the system to maximize efficiency to get the water as much as possible. The solar pump system fulfills concept of low carbon, energy conservation, environmental protection to improve the living standard in water-deficient area.

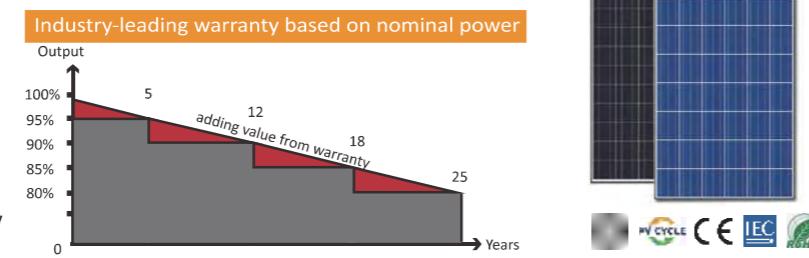

### ◆ System Features

- Reliable solution for agricultural irrigation, daily water, desert control in non-electricity and water deficient area.
- Wide application with all kinds of PV modules and 3-phase & 1-phase AC pumps
- IP 65 for outdoors application
- Max. operation temperature 60°C
- GPRS remote monitoring for real time operation status and control on/off
- Excellent performance during cloudy weather with 5% more water output compared to competitor
- ROI is only less than 2 years compared to diesel generator
- Full automatic unattended operation with perfect protection functions for long lifespan 25 years
- 2 years warranty for complete system, 10 years for PV modules

## Main Devices of Solar Pump System

### Solar Panels

- Based on nominal power(pnom)
- 25-year transferrable power output
- 5 years warranty of 95% power output
- 12 years warranty of 90% power output
- 18 years warranty of 85% power output
- 25 years warranty of 80% power output
- 10 years material and workmanship warranty

### Solar Mounting Structure

- Engineered for long product life and highly prefabricated to reduce installation costs;
- Very affordable option for mid-to-large PV installations;
- Easy installation and application in different location;
- Material as customers request.

### Solar Pump Inverter

- AC single phase/three phase solar pump inverter;
- Output voltage 220V~230V ac /380~460V ac;
- Power of low voltage ranges from 0.37kw to 4kw;
- Power of high voltage ranges from 2.2kw to 132kw.

### AC Pump

In order to keep high efficiency of whole system, please use all matching pumps from Jntech . We take single phase/three phase AC submersible pumps as example, for solar pump system configuration.

#### Operation Conditions

- Solid grain or fiber-free dilute clean non-corrosive liquids
- Max. liquid temperature is +25 °C
- pH: 6.5~8.5

#### Pump Motor

- Domestic or international brand
- Warranty can extend max. 3 years

## Accessories of Solar Pump System

### PV Combiner Box

Jntech PV combiner box shall be used for solar pump system from 22kW to 132kW, in order to reduce connecting cables for easy maintenance and low cost and to keep safety and reliability.

The combiner box has current counter-attack, over current, over voltage function and lightning protection as well. Customized design possible.

#### Main parameters

- Max. input DC voltage: 1000Vdc
- Max. input current: 10A
- Protection class: IP65
- Operating temperature: -25~+55 °C
- 8/12/16/24 input available

### Water Level Sensor

In some complex, high lift, long-distance water conveyance and irrigation system, we need to collect and control the application of water pressure, flow, location information, so we designed the device can get water level information of pump system and make the system stable and safe .

#### Features

- Remote wireless communication based on RTU, no communication cost, stable and reliable;
- Independent photovoltaic power supply, wireless complex wiring;
- The maximum 5km stable communication can be realized;
- RS484 communication, plug and play;;

### Outlet Filter

The outlet filter connected between solar pump inverter and pump. It is used once the cable between inverter and pump is too long.

#### Main parameters:

- AC Max. input voltage: 700Vdc
- Max. input current: 22A、44A、125A
- Protection class: IP65
- Frequency range: 0-60Hz

### AC Power Pack

AC power pack will realize AC input of solar pump inverter to make system working 24 hours.

#### Features:

- Support water pumping system working 24 hours per day;
- Keep the pump working in rainy weather and at night;
- Built-in DC circuit breaker, wall-mounting installation, easy operation.

#### Main parameters:

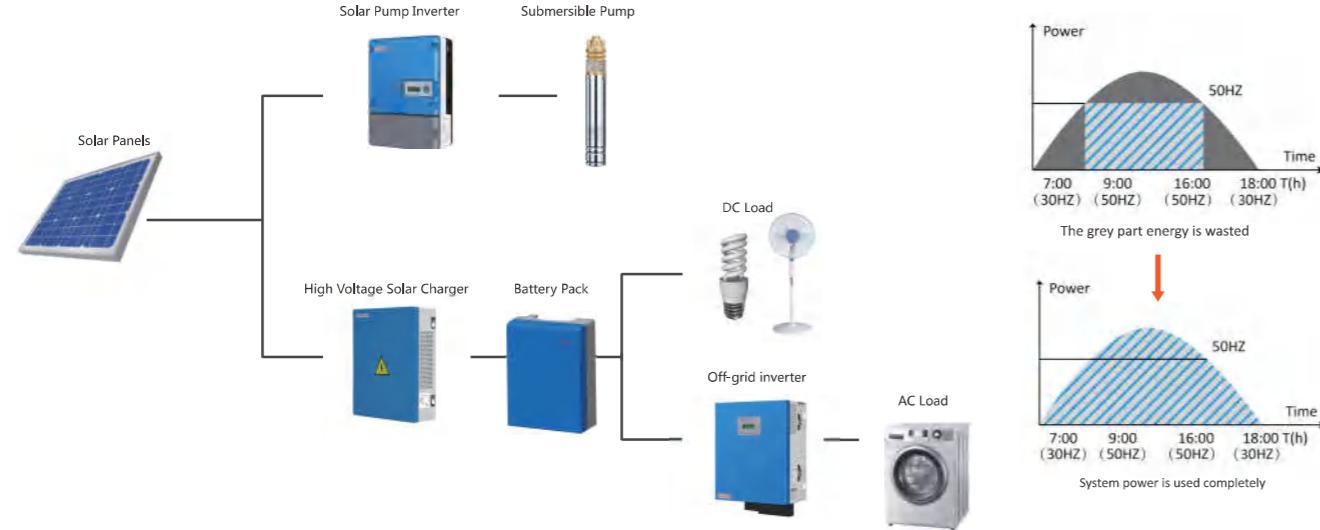

- AC input Voc: 360Vdc~460Vdc(3PH)
- DC Max. input current: 16.3A、41.1A、83A、122A
- Protection class: IP21(JNPH4AR) /IP65(JNPH1AR、JNPH2AR、JNPH3AR、JNPH3AR-S)
- Operating temp. : -20~60 °C

## Main Devices of Solar Pump System

### ◆ High Voltage Solar Charger

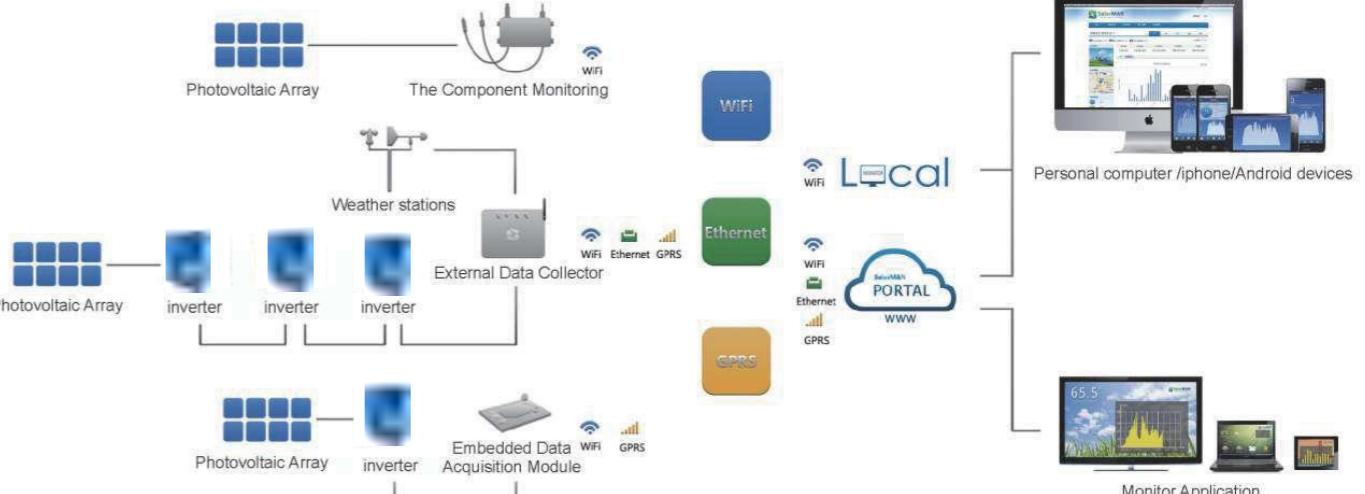

#### Features:

- Solar pump system can be used as independent off-grid generating system.
- Full system energy application with solar pump system and solar charger
- Wide high-voltage input range, higher reliability with isolated design.
- Battery of 12Vdc/24Vdc/48Vdc with 15A /25A/40A
- Excellent charging battery management with over-voltage,current protection function.
- Integrated switch, wall-mounted installation and easy operation.

## Accessories of Solar Pump System

### ◆ Monitoring System

#### Features:

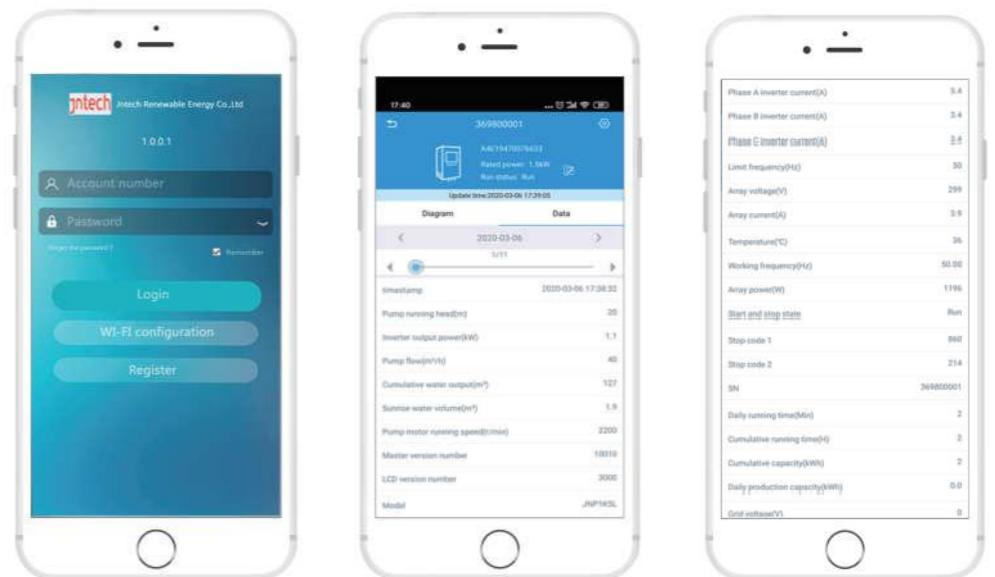

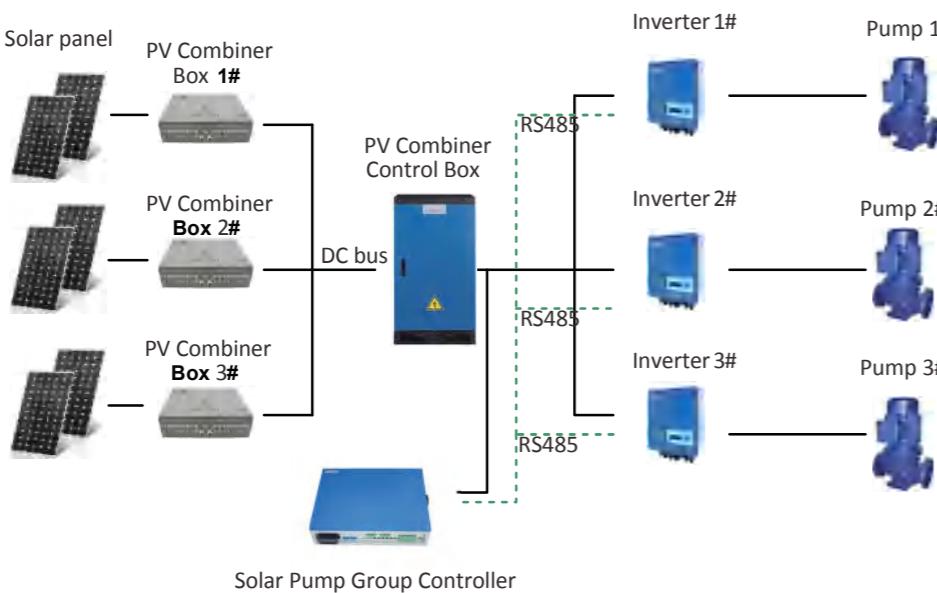

- Control the solar pump inverter remotely
- Manage all solar pump inverters and systems
- Check system operating status at any time
- Read all system information on PC, Iphone, Ipad and any other electronic device
- Get alarm record and error code once the system failed to operate
- Analyse the data to check if the system is in good working condition.

### ◆ Solar Pump Group Controller

Solar pump projects with large flow, high head with multi-level water lifting, multi-system pipeline parallel.Solar large scale pointer type sprinkler irrigation system, solar dripping irrigation system.

#### Functions:

- Real time energy scheduling and decrease significantly PV module cost.
- Realize system stable operation for lifting head over 1000m.
- Efficiency is 20% higher than traditional individual system.

## Solar Aeration System

### Solar Aeration System

#### System application

- Parks, wetlands, lakes, etc. landscape water treatment
- Rivers, lakes, etc. surface water purification
- Fish and shrimp farming etc.

#### System features

- Solar power supply all day, zero-cost operation throughout the year, green, energy-saving, environmental friendly;
- Automatic intelligent switch according to the intensity of light, adjust the aerobic power, no need for manual management throughout the year;
- Compared to traditional utility grid aeration equipment, no electric shock, safety;
- The core components have a service life up to 15 years to prevent environmental pollution and ecological damage;
- The metal parts of the system are made of aluminum alloy and stainless steel, which are durable and rust-proof;
- Energy storage and non-storage systems are available according to customer requirements.

#### System parameter

Name	Model	Quantity of panels	PV input power	MPPT voltage range	Model of inverter	Model of aeration aerator	Remote control	GPRS

## Solar Sprinkling Irrigation System

### Solar sprinkling irrigation solutions

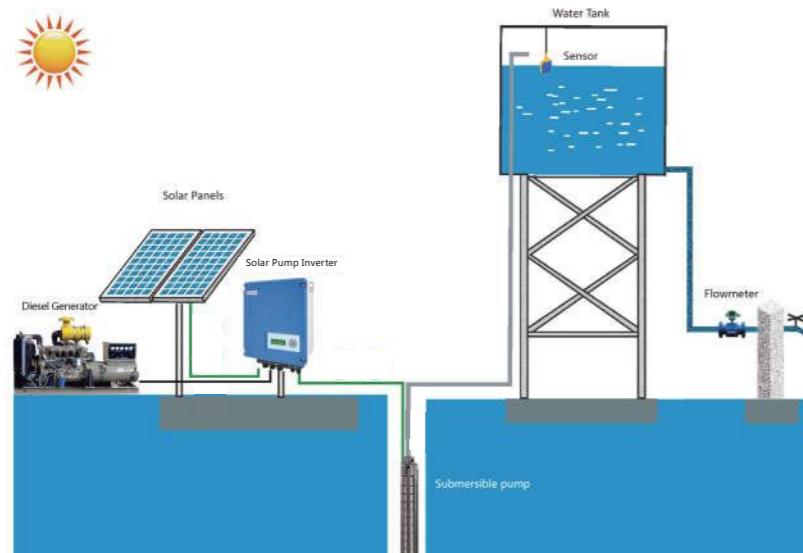

#### System feature

- The solar sprinkling irrigation power supply system is specially designed for the power supply of the sprinkling irrigation equipment with high product integration and advanced technology.
- The power supply of the system adopts solar direct drive technology, which maximizes the scale of energy storage part and greatly reduces the system cost.
- Built-in MPPT technology to maximize the use of solar.
- Wide MPPT range, flexible PV input.
- The combination of hardware and software can realize the constant pressure control of sprinkler water flow, which can greatly improve the system life and work stability.
- The solar sprinkling irrigation power supply system supports multi-channel signal input and can monitor the pressure, flow of the system in real time.
- Support grid and Diesel generator hybrid supply, solar priority seamless switching, energy saving, achieve 24 hours of uninterrupted system work.

#### Main specification parameters

Index	Model	JNG55K	JNG75K	JNG132K	Note
Main features of the irrigation equipment	The length of the truss	150~300m	300~450m	450~600m	Multiple specifications are available
	Rate of flow	100~150m³/h	150~200m³/h	200~300m³/h	
	Walking motor	0.75kW	1.1kW	1.5kW	
	Booster pump	1.1kW	1.1kW	2.2kW	
Area	Dosing pump	0.37kW	0.55kW	1.1kW	None
	Sprinkling irrigation area	100~425 acres	425 ~950 acres	950~1700 acres	
PV input	PV input	100kWp	150kWp	200kWp	None
	Direct current distribution	4 sets	5 sets	6 sets	
Sprinkling power system	DC power	JNP55kH	JNP75kH	JNP132kH	Multiplexed output, 220V/380V 4 pcs in series, Lithium battery is optional Energy distribution, group control, data collection, system operation, status control
	Off grid power	JNF15KLF/48-V2	JNF20KLF/48-V2	JNF30KLF/48-V2	
	Energy storage system	12V100Ah 4 pcs	12V100Ah 4 pcs	12V100Ah 4 pcs	
	Group controller	JNPGCH-V1	JNPGCH-V1	JNPGCH-V1	

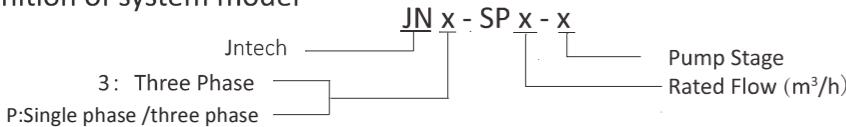

## Solar Pump System Configuration

### ◆ Remarks

- Polycrystalline 400W ( $V_{mp}=40.6V$ ,  $V_{oc}=49.0V$ ,  $I_{sc}=10.32A$ ) solar panels are used in system configuration.
- Configuration is designed with radiation  $1000W/m^2$  and rated working time of 5 hours and non-rated time of 3.2 hours
- When single string exceeds 17 pieces, Please contact Jntech engineer for system configuration.
- The design head should be considered to be 1.2~1.5 times more than the real head according to varied location.

### ◆ Definition of system model

### ◆ Daily water requirement: 5~10 $m^3$ (#:not optimal configuration)

System Model	Pump	Inverter	Solar Panels	Array	Rated Flow	Rated Head	Rated Daily Water Output	Daily Water Output Range			
	kW	kW	kW		$m^3/h$	m	$m^3/day$	$m^3/h$	m	$m^3/day$	
JNP-SP1-21	1.1	1.1	1.60	4*1	108	7		112	80	7	10

# Solar Pump Inverter

## Product Features

- ◆ Drive power-matched single/three-phase AC pump
  - ◆ Adopt advanced IGBT power module
  - ◆ High conversion efficiency, low temperature rise, low noise, long lifespan
  - ◆ Advanced MPPT technology, efficiency >99%
  - ◆ Fully automatic operation, it can store operation data for 10 years
  - ◆ Perfect system protection, high reliability
  - ◆ New design of anodized aluminum case
  - ◆ LCD display
  - ◆ Interface: RS485/GPRS
  - ◆ Modular design, easy to install, operate, maintain
  - ◆ Input of the utility grid/DG and photovoltaic, automatic switching, online energy complementary, photovoltaic priority, keep the pump rated work, and achieve 24H water supply.

## Definition of Model

A blue and white solar inverter unit, likely a SMA Sunny Boy model, mounted on a wall outdoors. The unit has a digital display and several control buttons. A small orange label on the top left corner reads "SMA".

A close-up photograph of a modern industrial power supply unit. The main body is a vibrant blue color with a light grey vertical panel on the right side. On the left, there's a control panel featuring a small digital display screen, several physical buttons, and a circular dial. A metal mesh vent is located below the control panel. On the right side, there's a vertical slot with a red handle, a yellow triangular warning label with a lightning bolt symbol, and a metal mesh vent at the bottom. The overall design is clean and professional, typical of high-end electrical equipment.

## Solar pump inverter

370W~550W single phase

### Project reference

JNTECH team started solar pump inverter research, development, products since 2010. JNTECH is always paying attention to customer's requirements, focusing on quality of solar pump inverters and doing best service for customer. After 10 years effort, JNTECH wined customers and partner's trust, reputation. JNTECH solar pump inverters have been using in more than 50 countries until now. Especially ,JNTECH products passed the test from Government engineer, NGO, UNDP, UNHCR,UNICEF,OCHA,ICRC in Asia, Africa and Middle East. JNTECH product's parameters and features are used in solar pump system tenders in these countries. More and more JNTECH solar pump inverters are using in their tenders.

Each person from JNTECH team is working hard to reward customer's trust and reputation. JNTECH is constantly making effort on the way for making the world greener.

### 37kW solar pump system in Pakistan

Pakistan is an energy deficient country .The energy crisis has greatly subdued the country's economic growth with billions of rupees in losses, particularly in the industrial and agricultural sectors. Power consumption has been growing steadily and an average annual increase of 7% has been postulated for the next four years. As a result of this power shortage, the agriculture sector has been facing acute irrigation water shortages. So the solar pumping system is the best choice for the agriculture irrigation.

Location of the project: Multan,Pakistan  
Application: Agriculture irrigation  
Head: 75m  
Daily water output: 336~554 m<sup>3</sup>

### 22kW Solar & Utility Grid Hybrid Solar pump system in Pakistan

Project Location	Gilgit Baltistan Province
Application	Agriculture irrigation
Head	160 feet
Daily Water Output	1500 litres/min
Running Time	12hours in Summer, 8 hours in Winter
Full Load Time	8 hours in Summer, 5 hours in Winter
Module Type	250W polycrystalline modules
Solar panels	6 strings, each string 20pcs
Solar pump Inverter	JNP22KH(22kW)
Submersible Pump	30HP

### 7.5kW solar pump system in Turkey

This system is installed in Turkey with depth of 165m, one day water output is about 45 m<sup>3</sup>. This system we use 2 strings 250W, polycrystalline modules, each string there are 19pcs solar panels So total 38pcs, 9500W solar panels. The submersible pump is 7.5kw 380V, 50Hz, three phase pump. The application of this system is for farm irrigation. The solar pump system is the best choice for the area without grid electricity. Compared with diesel pumping system, It is much more cheaper clean, environmental, in long term.

## Project reference

### 45kW solar pump system in Uzbekistan

One of only two doubly landlocked countries in the world, and benefit from its special geographic position , Uzbekistan has a long sunshine time of up to 2,700 hours to 2,980 hours one year, and some areas can be up to 3,130 hours one day, summer sunshine time can be up to 15 hours, winter not less than 9 hours, so Uzbekistan's solar energy market has huge potential.

Uzbekistan is also a water-deficient country, as an ancient irrigated agricultural country, the scarcity of water resources had restricted the development of agriculture, especially cotton industry. Nowdays the solar pumping system's application is well-being of local people.

Four sets of 45Kw JNTECH solar pumping system are installed at Ferghana, Uzbekistan, which start to work automatically from 7:30 am to 18:30 pm, attract local and central government's high attention.

### 22kW solar water pump system in Yemen

As important as electricity may seem, water is essential to life. Bringing life giving water from under the ground using only the power of the sun is very rewarding.

This 22kw solar pump system is installed in Hodeidah by Hefei JNTECH Yemen office . Total 30.6kw poly pv modules are used,22kw submersible pump Head is 100 m, Flow is 60m3/h, the matching 22kw Jntech solar pump inverter is with MPPT 460-850Vdc with IP65, 3 years warranty.

The environment temperature can be -25 °C to +60 °C , so the high temperature in Yemen is no problem for the working of our inverter. The system starts to work at 6:45 in the morning up to 5 o'clock in the afternoon. the 10 hours working time surprised a lot of other farmers there.
